Let's End the Hovering Now

A germ phobia grips America, especially when it comes to using restrooms. And because of this, people don't want to touch any surface in a restroom if it can be avoided.

But germ phobia problems can create opportunities. And that is the case with Dennis Wilson of Hygiene Solutions, in San Diego, California.

Dennis's company cleans restrooms--just restrooms. "Some of my customers tell me they are afraid to sit on toilets anymore," he says. "Instead, they just hover over them."

To help end the hovering, Dennis uses the Kaivac No-Touch Cleaning system to hygienically clean his customers' restrooms.

The machine applies chemicals to all surfaces of the restroom, ceilings to floors, rinses the areas clean, and then vacuums up the solution, soils and contaminants.

“My restrooms are ready for use right away,” he says. “But now, they are sanitized, deep cleaned, odor free, and safe to use.”

About Kaivac, Inc.

Headquartered in Hamilton, Ohio, Kaivac, Inc. delivers complete science-based cleaning systems designed to produce healthy results and outcomes while raising the value of cleaning operations and the dignity of the worker. The originator of [No-Touch](#) Cleaning[®], Kaivac offers an integrated portfolio of environmentally friendly cleaning products designed to remove the maximum amount of soil and potentially harmful biopollutants in the most cost-effective manner possible. For more information, visit www.kaivac.com.

About No-Touch Cleaning®

Designed to remove the maximum amount of soil, bacteria, and other biopollution, Kaivac's patented No-Touch Cleaning systems combine an indoor pressure washer, a powerful wet vacuum and chemistry into an integrated system.

Empowering workers to hygienically clean without touching contaminated surfaces, these systems not only clean better, but also cut labor, chemical, and equipment costs while raising worker morale and image. In fact, studies show that Kaivac's No-Touch Cleaning systems are 60 times more effective in reducing bacterial contamination on tile and grout surfaces than mops, which are more likely to spread contaminants than remove them.
