## **Message in the Media**

**Chicago, IL** – The growth media engineered for Green roof systems must provide the nutrients necessary for the vegetation to survive and thrive in all types of climates and conditions.

To accomplish this, Weston Solutions®, manufacturer of the GreenGrid® modular Green roofing systems, has developed a proprietary mixture of organic and inorganic growth media.

Formulated after years of research and field-testing, the growth media used in GreenGrid modular systems has the proper pH balance, air space, nutrients, and drainage to help maximize root development and improve plant growth, quality, and survival. And it helps reduce costs for the end customer.

## **About GreenGrid® Green Roof System**

GreenGrid® Green Roof System is a division of Weston Solutions, Inc-a leading environment and redevelopment firm delivering comprehensive solutions to complex problems for industry and government worldwide. Employee-owned, the company's services encompass environmental remediation, redevelopment, and management and compliance. Its emphasis on restoring resource efficiency to its clients' operations - including land, air, water, facilities and staff - ensures that clients derive maximum value from their resources.
