Moving the Clock Forward 100 Years

“Restrooms are hazardous waste transfer stations where cross-contamination can occur, especially with children,” says Juan Zamora, President of Hygen, a jansan distributor in Tampa, Florida.

“Not only are children at risk, so are our cleaning workers,” adds Zamora. That’s why he recommends Kaivac No-Touch Cleaning™ systems.

“The user never has to touch anything,” he says. “And the Kaivac cleaning system [always] uses clean water.

Conventional cleaning methods [mops, buckets, and rags] are 100 years old and do nothing but transfer soiled water and bacteria from one place to another.”

Zamora says when a restroom is cleaned with a Kaivac system, the bacteria is removed and “the [fresh] smell is immediately noticeable. That's why we offer a free testing, so [our customers] can smell the difference before and after.”

Zamora adds that the Kaivac cleaning system is also a cost saver. “As much as \$10,000 a year in labor and chemical costs are saved.”
