

[New concrete polishing system](#)

Powr-Flite introduced the new, multistep Diamabrush Concrete Polishing Floor system. The system includes a Millennium floor machine at no charge, a concrete tool, and five different blades varying from 100 to 2,000 grit. The different grit blades allow the user to choose the desired floor finish level from moderate gloss to a high-gloss, retail-store-like finish. The system replaces the heavy, expensive floorcare equipment typically needed for polishing concrete. What's more, no harsh chemicals are needed, making it environmentally responsible as well.
