Powr-Flite
Introduces New
"Green"
Technology to
Care for
Concrete

[PDF](#)

[Print](#)

[E-mail](#)

Concrete floors are becoming more and more popular in all types of facilities—from offices, industrial buildings and schools, to stores and convention centers.

This is occurring because concrete is a very cost-effective flooring system and it is often viewed as a "Green" alternative to many conventional floor systems. In fact, using concrete can help facilitate the process for facilities wishing to obtain LEED® certification.*

However, maintaining interior concrete flooring does require some skill and know-how. Using strong chemicals to clean, seal, polish, or re-coat the floor essentially eliminates the environmentally friendly benefits of concrete.

New Green Concrete Technologies Now Available
New technologies have been introduced, such as the new Diamabrush™ Multi-Step Concrete Floor Polishing System from Powr-Flite, which makes it easier for facility managers to keep concrete floors looking their best in a relatively simple, healthy, environmentally responsible manner.

The Diamabrush system features a flexible, spring-steel blade designed to be in constant contact with the floor. This maximizes the tool's effectiveness as it improves worker productivity.

Additionally, the system includes a series of increasingly finer diamond "grit" blades, ranging from 100 to 2,000 grit and in two different sizes: 16 and 19 inches. The different blades polish the concrete, allowing the user to choose which blades and how many steps are needed to achieve the desired results.

"The system transforms a conventional floor machine into a concrete polishing machine without the need for heavy and expensive equipment," says Rod Godlewski, vice president of marketing for

Powr-Flite. "And, of course, there are no chemicals involved in the process."

Godlewski adds that the system is also cost effective. Studies indicate the Diamabrush system can clean up to 15,000 square feet at a cost of about \$0.25 per square foot.

More information is available at www.powr-flite.com or by calling 800-880-2913.

HELP – That is what Christian Lamitschka named his Charity Project

HELP that is the name that Christian Lamitschka and his cooperation partner the, Rednecks WesternLaedle, gave to their charity project which will take off on the 1st of August 2008. Christian Lamitschka and the owners of the Rednecks WesternLaedle, Birgit and Chris King, explain the meaning of HELP: „HELP is a synonym for Handicapped, Engagement, Loyalty, Protection and in German this also describes exactly what we want to achieve. Handicapped children in America and Germany often do not get enough commitment , loyalty and protection.“ Through HELP they want to supports organisations that pay attention to the needs of handicapped children in Germany and America. „Today’s life is not easy to handle for children. This is even more the case if children are born with a handicap as their childhood is means a lot of privations.“ In order to make life easier Christian Lamitschka and his partners want to use HELP to present some good times to handicapped children. Numerous donations from artists and companies already found their way to Christian Lamitschka.

"Geldof and Bono’s Charity is Crippling Africa" claims African

AID Action

Despite billions of pounds given for debt relief and aid in Africa, since the original Band Aid campaign, the number of Africans living on handouts has increased by 500%. African governments who used to rely on only 20% of their annual budget from overseas aid are now dependent on a 70% contribution.

- Celebrity campaigners and western charities "increase corruption and dependency"
- Politically correct Western media avoid real issues
 - Only 25% of 5.8m AIDS victims have access to life saving drugs
 - Call new type of investment, in not-for-profit, transparent manufacturing facility
 - A major rethink required ahead of International World AIDS Day on 1st December

Despite billions of pounds given for debt relief and aid in Africa, since the original Band Aid campaign, the number of Africans living on

The Renewable Energy Centre.co.uk urges Gordon Brown not to renege on 2020 Renewable Energy Targets.

The Guardian yesterday reported that a leaked government document contained recommendations to negotiate a reduction in the 2020 European Union target that 20% of all UK energy must come from renewable sources. Campaigners in support of the renewable energy targets have already expressed their anger and The Renewable Energy Centre today released a statement highlighting how negative, both the political and environmental consequences could be. Earlier this year the Blair administration signed up to the EU targets knowing the targets were going to be hard to achieve but that they were possible. At the same time Gordon Brown was establishing a European emission trading scheme which allowed wealthy governments to pay others to supply renewable energy in order to reduce emissions. The 2020 targets, if achieved by the UK, could undermine the credibility of Gordon Brown's scheme and it is thought that this could be a mitigating factor if the government are seeing to reduce the target.

Powr-Flite Introduces New “Green” Technology to Care for Concrete

Concrete floors are becoming more and more popular in all types of facilities—from offices, industrial buildings and schools, to stores and convention centers.

This is occurring because concrete is a very cost-effective flooring system and it is often viewed as a “Green” alternative to many conventional floor systems. In fact, using concrete can help facilitate the process for facilities wishing to obtain LEED® certification.*

However, maintaining interior concrete flooring does require some skill and know-how. Using strong chemicals to clean, seal, polish, or re-coat the floor essentially eliminates the environmentally friendly benefits of concrete.

New Green Concrete Technologies Now Available

New technologies have been introduced, such as the new Diamabrush® Multi-Step Concrete Floor Polishing System from Powr-Flite, which makes it easier for facility managers to keep concrete floors looking their best in a relatively simple, healthy, environmentally responsible manner.

The Diamabrush system features a flexible, spring-steel blade designed to be in constant contact with the floor. This maximizes the tool’s effectiveness as it improves worker productivity.

Additionally, the system includes a series of increasingly finer diamond “grit” blades, ranging from 100 to 2,000 grit and in two different sizes: 16 and 19 inches. The different blades polish the concrete, allowing the user to choose which blades and how many steps are needed to achieve the desired results.

“The system transforms a conventional floor machine into a concrete polishing machine without the need for heavy and expensive equipment,” says Rod Godlewski, vice president of marketing for Powr-Flite. “And, of course, there are no chemicals involved in the process.”

Godlewski adds that the system is also cost effective. Studies indicate the Diamabrush system can clean up to 15,000 square feet at a cost of about \$0.25 per square foot.

More information is available at www.powr-flite.com or by calling 800-880-2913.
