Tornado Carpet Extractors With Perfect Heat Technology

1/8/2008

Chicago, IL - Tornado has stepped way ahead of the pack with its new Marathon Carpetrinser 2-400 upright carpet extractor with Perfect Heat technology. Using the heat generated by the vacuum motors along with an automatic heating system, cleaning solution is heated to 212 degrees F. Heat improves the effectiveness of cleaning chemicals. When tested against similar carpet extractors, the Marathon Carpetrinser 2-400 solution temperatures were more than 40 degrees hotter-throughout the cleaning process-than its nearest competitor.
