### New Product Release! Sólus Portable Extractor

#### Hot New Extractor for the Cold Winter

The end user has always been an important source of input when U.S. Products begins the design phase for new products. By listening to their needs, we design equipment that helps them to be more productive and effective. The new [Sólus](#) combines many new innovations that we have found to be successful in other U.S. Products equipment.

#### *NEW Sólus Heated Portable*

New, improved performance features include **top mounted dual vacuum systems**. By top mounting these powerful vacuums, we have increased airflow efficiency and boosted water recovery performance to a whole new level.

The [Sólus](#) was designed around one person operation. **Upright, dolly design with 12" rear wheels and roller handles** make the Sólus easy to transport up and down stairs or in and out of a vehicle by one person.

Another new exciting feature is the **solution pre-heat system**. The [Sólus](#) uses the same signature heating technology found in all our heated extractors to deliver instant heat, but we have added a pre-heat system to help maintain that heat. The recirculator runs the solution through the heater, raising the temperature in the tank up to 125°F for consistent hot water extraction.

For innovation and superior performance, you can always count on U.S. Products to be the leader! Click on the picture of the [Sólus](#) for more information on this amazing new portable carpet extractor.
