

## **Waterless Urinals are Full of ... Soy!**

Hospitality and office facility owners save ever increasing water charges, sewer and maintenance charges and realize paybacks normally in under two years!

**The largest water user in offices  
is...urinals!**

But there are solutions widely available...waterless urinals.

### **Now waterless urinals can be made even more environmentally friendly when manufactured with Soybean-Based HPC**

With almost 20 years of installation history in high traffic facilities, Waterless Co. is leading the Waterless No-Flush™ industry yet again with the introduction of its new soybean-based High Performance Composite (HPC) urinals.

The company is the innovator and leader in this water conserving category, stating that they offer the most simple and most cost effective system on the market.

### **Two Year Payback**

Hospitality and office facility owners save ever increasing water charges, sewer and maintenance charges and realize paybacks normally in under two years!

The HPC urinals are LEED® applicable. Patented No-Flush™ urinals work completely without water or flush valves. The system is touch free, improves restroom sanitation and eliminates odors. Waterless No-Flush™ urinals can be easily installed to all restroom applications. High traffic facilities benefit the most, either through retrofits or in new construction.

Facility management and engineers are now able to better predict rising operational costs as well as improve IAQ.

Waterless offers both ceramic and HPC fixtures in various sizes and colors.
