### Why Go Modular?

As the popularity of Green roofing systems grows, more are becoming available.

However, according to the Michigan Department of Environmental Quality (DEQ), one system stands out because of its simplicity and flexibility: *modular* Green roofs such as the GreenGrid<sup>®</sup> System manufactured by Weston Solutions, Inc.

According to DEQ, modular systems are extremely lightweight, and installation can be completed in a cost-

saving matter of days—rather than the weeks it takes to install a built-in-place system.

Moreover, because vegetation is preplanted with a modular system, DEQ reports that survivorship is improved, helping to lower replacement costs as well.
